RADIATORS

UNMATCHED PRODUCT QUALITY

- First & only CAPA-certified radiators produced in North American facility*
- Only the highest grade materials used in production
- Extensive in-house laboratory and assembly-line testing capabilities
- Drop-in fit for easy installation
- Equipped with accessory packs to accommodate various original equipment models
- Meet or exceed OE specifications for fit, form, and function
- Transit tested with robust packaging to shield part from damage in shipping
- Transmission and/or oil coolers included for vehicle performance & product longevity*

*On applicable models

TRUST PARTS developed and engineered here

RIGOROUS IN-HOUSE TESTING

Accelerated Aging and Freezer Gasket Testing (EXTREME WEATHER)

Measure the ability of all gaskets in the radiator to remain leak-free under extreme hot and cold conditions

Thermal Testing (LONGEVITY)

Measures the longevity of the radiator by simulating real life conditions of temperature variations over time

滋

Pressure Cycle Testing (DURABILITY)

Measures the durability of the radiator to withstand pressure over time

Calorimeter Testing (PERFORMANCE)

Measures the heat dissipation performance and thermodynamic characteristics of the radiator by providing different fluid input temperatures at controlled flow rates and pressures

ъ

(PEACE OF MIND)

are leak-tested in production to ensure a leak-free design

Assembly-line Pressure Leak Testing

100% of all heat exchangers
