

# DORMAN ACTIVE SUSPENSION COMPONENTS

## ACTIVE SUSPENSION COMPONENTS NEVER REST. NEITHER DO WE.

More vehicles than ever are equipped with suspension systems that improve ride, handling, load capacity, and aerodynamics for fuel efficiency. When system components fail, it means a costly visit to the repair shop. Only Dorman offers the affordable aftermarket quality and latest technology your customers want, and the coverage you need.

Our engineers aren't satisfied with the status quo designs you can get from the dealer, or remanufactured assemblies with unpredictable reliability and frustrating core charges. That's why our Dorman® OE FIX™ active suspension components boast upgraded designs, improved seals, and better materials, so you can sell your customer repairs that perform better and last longer.

### Count on Dorman innovation and quality for:

#### **Air suspension compressors and components**

Including exclusive OE FIX features like upgraded motors, a weather-resistant connector and membrane, proprietary advanced software, and all accessories included for an easy installation.

#### **Air suspension shocks, springs and struts**

Rigorously tested over 2 million cycles (10 years of average service) at temperature ranges between -40°F and 135°F.

#### **Consolidation of multiple part numbers**

Reduce your inventory, and eliminate application confusion and returns.

#### **Magnetic ride shock assemblies**

Aftermarket-exclusive, affordable replacements that restore suspension performance and ride quality to OE specifications – preassembled, with no programming or adaptations required.

#### **100% new construction**

Eliminates core charges and the unpredictable availability of remanufactured components.
