

# DORMAN OE FIX™ POWER STEERING COOLERS

Factory-style wire fins

Dorman OE FIX™ stacked-fin design

## BUILT STRONGER TO LAST LONGER

The original power steering cooler on many GM and Ram trucks and cars often fail when the coolers' wire-style fins corrode, bend and break. Our Dorman OE FIX™ coolers feature a more robust stacked-fin design for greater durability and longer service life.

Don't replace a failed power steering cooler with a factory part that could fail the same way again. Upgrade to a Dorman OE FIX™ replacement for a long-lasting repair.

**Drop-in upgrade** – engineered to exacting specifications to match the fit and function of the OEM cooler

**Improved design** – robust stacked-fin design for greater durability and longer service life

**Premium material** – cooling fins are made of high-quality materials for superior corrosion resistance and strength
